In Florida, all public schools, hospitals and nursing facilities are required by Florida Building Code to have lightning protection systems to guard against the destructive forces of lightning.

Your building—be it an office, restaurant, stadium, military facility, condominium, retail space, water treatment facility or government property—should too.

Lightning has the power to tear through buildings, explode walls, disturb steel and ignite deadly fires. The cost of this damage can be enormous, not to mention deadly. The potential for losses due to equipment damage, business interruptions and personal injury caused by lightning can be a major expense for companies.

A properly installed lightning protection system can minimize this threat to your business. By providing the specified path on which lightning travels, lightning protection diverts lightning’s destructive power safely into the ground.
It’s not the building.

It’s the work.
If you are looking for a lightning protection company that can provide comprehensive lightning protection services, we highly recommend Bonded Lightning Protection. The company has been providing and installing commercial lightning protection systems for Tri-City Electric Co. for over 40 years. They have always provided this service efficiently and professionally. The quality of their work is excellent.

Roddy Borden, Vice President
Tri-City Electric Co., Inc

We use Bonded Lightning for all of our lightning protection needs. Patrick Dillon and his team of professionals are a respected authority in their field and a dependable subcontractor who always get the job done right. I highly recommend everyone take the time to sit with the Dillons to understand how important lightning protection is for a home or business, and to also trust the almost 45 years of experience that Bonded brings to the table.

Geoff Collins, Vice President
Affinity Construction Group
The primary components in a system:

- Air terminals (rods)
- Conductor (cable)
- Bonds to metallic bodies
- Ground terminations
- Surge arresters

As an industry leader with more than five decades of experience, our installation process and materials comply with nationally recognized safety standards of Underwriters Laboratories and the National Fire Protection Association.
Surge Protection & Suppression

A professional lightning protection system protects your structure, but what about the electronic equipment inside your building?

Electronics play a vital role in our day-to-day lives, including powering life safety systems and personal medical assistance machinery. Professional surge protection is crucial to preventing their disruption and damage.

Utilizing a power strip to protect valuable appliances and electronics is at best a feel good measure. At worst, it invites the critical failure that sees these devices rendered inoperable and often damaged beyond repair. In the case of medical equipment, the potential ramifications go well beyond costly repair and replacement.

Through the use of Bonded Lightning’s surge protection, unwanted electrical energy is diverted over a safe threshold to a protective component in the surge protector itself. The surge protector then allows only a normal and safe amount of electricity to pass through your devices.

In addition to lightning and surge protection systems for your commercial building, Bonded Lightning Protection also offers lightning and surge protection systems for residential structures, as well as lightning warning systems, lightning protection for trees, design, inspection and repair services and free estimates.

In South Florida, each square mile is struck by approximately 25 bolts of lightning a year.

Homeowner losses due to lightning in the U.S. exceed a billion dollars annually and represent almost 5% of all residential insurance claims.

Lightning causes more deaths and destruction in a typical year than floods, hurricanes and tornadoes combined.
It's not the equipment.

It’s the life.
We Have History

Bonded Lightning’s corporate roots read like a family tree.

The Washington Monument, Lincoln Memorial and White House are just a few of the distinguished properties nationwide where Bonded Lightning has installed lightning protection systems.

1892
Reginald DeKoven Hereford founded the original Bonded Lightning Protection Systems in Washington, D.C. His son, Reginald Charles Hereford, eventually assumed control of the company.

1973
Reginald’s daughter, Diane Dillon, and son-in-law, Dennis Dillon, founded their Bonded Lightning Protection Systems, Inc. in Palm Beach County.

1975
Bonded Lightning Protection Systems hired its first Florida employee.

1978
Dennis and Diane Dillon moved Bonded Lightning from Riviera Beach, Florida, to Jupiter Farms, Florida. Dennis built the company’s office and workshop on the family’s property, where it still stands today.

2001
Bonded Lightning moved to its current location and headquarters in Jupiter, Florida.

2016
Bonded Lightning opened a regional office in Tampa, Florida.

2017
Bonded Lightning opened a regional office in Tallahassee, Florida.
