Since 1973

Protecting People, Property & Assets

Since 1973
Private residences are exceedingly vulnerable to lightning damage. Metal building components, irrigation and security systems, invisible and electric fences and sensitive electronic equipment all increase the potential for lightning damage. A professionally designed and installed lightning protection system is inconspicuous. In the case of new construction, the system is integrated into the home’s construction. On existing homes, Bonded Lightning custom designs and installs a system that does not compromise the home’s aesthetic. Bonded Lightning sells and installs a variety of decorative finials that are custom crafted from start to finish.
It's not the house.

It's these two.
“Throughout the years we have developed multiple residential and equestrian projects and have always received excellent service from Bonded Lightning. They provide a full lightning protection service—including design, permitting and installation—and always in a timely manner.”

Claudia De Narvaez, Tara Management, Inc.

“Saved my house from damage! I lost my tree out front, but everything was safe in my house. I highly recommend this outstanding company.”

Jean Peters, Homeowner
The primary components in a system:

- Air terminals (rods)
- Conductor (cable)
- Bonds to metallic bodies
- Ground terminations
- Surge arresters

Every structure needs a LPI certified lightning protection system. By providing the specified path on which lightning travels, lightning protection diverts lightning’s destructive power safely into the ground.
Surge Protection & Suppression

A professional lightning protection system protects your structure, but what about the electronic equipment in your home? Harmful electrical surges can enter your home through power lines, communication lines and other utility lines. Our qualified lightning protection specialists can make recommendations and install surge protection that is tailored to meet your individual needs and protect all your valuable electronic equipment and personal medical assistance machinery.

In addition to lightning and surge protection systems for your home, Bonded Lightning Protection also offers lightning and surge protection systems for commercial and industrial structures, as well as lightning warning systems, lightning protection for trees, design, inspection and repair services and free estimates.
In South Florida, each square mile is struck by approximately 25 bolts of lightning a year.

Homeowner losses due to lightning in the U.S. exceed a billion dollars annually and represent almost 5% of all residential insurance claims.

Lightning causes more deaths and destruction in a typical year than floods, hurricanes and tornadoes combined.
The Washington Monument, Lincoln Memorial and White House are just a few of the distinguished properties nationwide where Bonded Lightning has installed lightning protection systems.

1892
Reginald DeKoven Hereford founded the original Bonded Lightning Protection Systems in Washington, D.C. His son, Reginald Charles Hereford, eventually assumed control of the company.

1973
Reginald’s daughter, Diane Dillon, and son-in-law, Dennis Dillon, founded their Bonded Lightning Protection Systems, Inc. in Palm Beach County.

1975
Bonded Lightning Protection Systems hired its first Florida employee.

1978
Dennis and Diane Dillon moved Bonded Lightning from Riviera Beach, Florida, to Jupiter Farms, Florida. Dennis built the company’s office and workshop on the family’s property, where it still stands today.

2001
Bonded Lightning moved to its current location and headquarters in Jupiter, Florida.

2016
Bonded Lightning opened a regional office in Tampa, Florida.

2017
Bonded Lightning opened a regional office in Tallahassee, Florida.

Bonded Lightning’s corporate roots read like a family tree.
